

ST512-SP26-Homework-1

Jason Menjivar-Hernandez

Problem 1

$$n = 36$$

$$\bar{x} = 23.4$$

$$sd(s) = 7.2$$

$$CI: \bar{x} \pm t^* \times SE$$

$$SE = \frac{s}{\sqrt{n}}$$

$$SE = \frac{7.2}{\sqrt{36}} = 1.2$$

$$t^* = qt(1-(.04/2), 36) = 2.13$$

$$CI: 23.4 \pm 2.13 * 1.2$$

$$96\% CI: (20.84, 25.96)$$

Problem 2
